About the Cover

Anna Nikolich, age 12, created this drawing entitled Aspergillus after successfully overcoming central nervous system aspergillosis and acute pre-B-cell leukemia. Her successful recovery was a team effort of her family and healthcare team at the Children’s Hospital of Wisconsin, Milwaukee and at Weill Cornell Medical Center of New York City. Anna has sought to help children with life-threatening mycoses and other infections through her courageous example and drew this illustration to increase awareness about aspergillosis.

Anna has received care at Children’s Hospital of Wisconsin (http://www.chw.org/display/PPF/DocID/20605/router.asp), located near Milwaukee. This institution is one of the leading centers for pediatric healthcare in the United States. The hospital provides inpatient care, including transport of critically ill or injured children and intensive care services, and more than 70 specialty outpatient clinics that care for the full range of pediatric healthcare needs.

She also received additional care through the Transplantation-Oncology Infectious Diseases Program at NewYork-Presbyterian Hospital (http://nyp.org/services/index.html), a top-ranked clinical and medical research center. NewYork-Presbyterian Hospital is internationally recognized for its outstanding comprehensive services.
